SAP Web IDE screens with new icons added and customized

If you have a specific design question or proposal, please feel free to post your question in the SAP Fiori Community instead. This post originally appeared on SAP Community. SAP Fiori tools, technologies, and templates can accelerate how you build, test, and deploy enterprise applications using your favorite development framework. The library contains information about dozens of out-of-the-box SAP Fiori Apps. By using SAP Fiori, you can help ensure that your app designs are consistent across all devices. The advantage of using the Fiori stencils and icons in Axure RP is that they automatically comply with the SAP Fiori Guidelines, saving you the time of having to go through the 27-page checklist when you go through the SAP Fiori App certification phase. To save space, the text truncates automatically after a given number of characters. If you don't have Axure RP, you can still download a free-trial copy for 30 days for this exercise. Thank you for your help us to improve our guidelines! You have designed your first Fiori App. For the UI Elements area, the overview also includes a helpful list of all UI element topics. All guidelines on choosing the right control are now in a separate When to Use section under UI Elements. When to use which control? New guideline feedback option You may have noticed the new blue feedback button on the right of the screen. Create role specific: You can also take a look at the SAP Fiori Application Reference Library. Here's one for my travel expenses. Managers who approve the expense, for example, will see a different screen than the employee who sends the expense. Select a template from the SAP template library on the left and drag it to the design area. One of the most commonly used templates for this type of application is SplitScreen Object. Turn on Axure RP and load the Fiori libraries you have downloaded. Now let's dive. Large (L) A for desktop screens Medium (M) A for tablets with touch controls Small (S) A for phones with touch controls. Learn more about these sizes here. For our expense application, this could be the type of expense, the amount of the expense, the receipt (as an attachment), the date and the purpose. Covers interaction patterns when triggering deletion from a list report or from an object page. ExpandableTextFor sensitive tables, lists, and forms, you can now display longer descriptions as expandable text. Create a Master Detail application. We will do our best to follow up and improve the content. Comment option Note: To protect your privacy, any feedback you provide to us is anonymous, which means we cannot answer any questions. The best practices of the guides will help you adapt them to your own settings. Deleting objects As part of a series of updates to the guides on handling objects, there is now a theme dedicated to deleting objects. This is where you can have fun playing with the interface and setting up your perfect app. Advanced Tip: If the templates you use are built as Axure RP repeater widgets, you can even load test data from an Excel spreadsheet if you want to go to the More realistic. Please, let us know if you find the useful guidelines, or if something is wrong or missing. With SAP Fiori, you can provide a coherent user experience in all your applications. The invisible message provides values in the dynamic changes to the UI that are otherwise only shown on a visual level. Do you need more information? In addition to regular content updates, we're also going to review the guide's navigation and add a new feedback option. The new advanced picture message control is now available in SAPUI5. We have compiled a list of additional resources. Back to Top The SAP Fiori Web Application Design Guidelines have been updated to version 1.88. (However, you will need to be careful about style and customize the templates, however, to stay within the guidelines.) As PostScript, keep an eye out for the next update of SAP's Fiori, which SAP Partners will work. Additional templates such as cards and general information pages. Users can then expand the entry to view the full text, which appears online or in a Popover text. Expandable A text collapseExpandable A expanded onlineExpandable text expanded as PopoverSmart Controls with version 1.88, we add guidelines for the existing Smart Form and Smart List controls, which are compatible with the version of ODATA 2.0. can create read-only, editable views of a form using ODATA annotations for smart fields. Once you've designed your master detail application for one screen size and one form factor, it's easy to customize the designs for other devices using the same templates for the other two sizes. Find out exactly what the user needs to do to complete the task and how they will interact with your product. With version 1.88, we've adapted the guide's navigation menu to organize the overall content more consistently and make it easier to identify what's in each section. In addition, the addition of menu selector A .soltarA o satis raerc arap ovianetra euqofno n se etneigilneti atsl A .outAt nu noc satneimarrhe ed arrab and anicoropn nAibmaT saedi riunE .abeup ed
